

Britannia Maritime Aid News – 04 November 2021

COP26 in Glasgow was the occasion for the first showing of the superb 1:100 scale model of the BMA ship, viewed and discussed with dignitaries such as HRH The Princess Royal and Kitack Lim, the IMO Secretary General, along with many leading figures in the UK Maritime Industry such as the President and Chief Executive of the UK Chamber of Shipping.

The detailed model allowed us to demonstrate the unique characteristics of the World's first dedicated HADR/Training Vessel and discuss how such ships could be built and effectively deployed for many countries faced with dealing with the increasing severe consequences of climate change.
